Networking

- Network: is a group of interconnected devices that exchange information these devices can be connected locally by cable or wirelessly through the internet.
- Host Rules:
 - Clients: are computers that send requests to the servers to retrieve information.
 - Host/End device: every computer on the network.
 - o Servers : are computers that provide information to end devices :
 - Email
 - Web
 - Files
- Client server network :
 - Every device is **either** a client or server .
 - A client established a connection with the server over the network.
 - o Servers can be expensive and difficult to run.
- Peer to peer network (P2P):
 - o This network configuration has no central server.
 - Each computer is equal in responsibility and each has the ability to work as **both** a client and server.
- End devices: is where a message originates from or where it is received:
 - o Desktop computer
 - o Ip phone
 - Laptop
 - Printer
 - o Iv
- Intermediary Network Devices : interconnects end devices :
 - Switches
 - Wireless
 - Access points
 - Routers
 - Firewalls

Network Media:

- Local area network (LAN): is a network infrastructure that spans a small geographical area.
- Wide area network (WAN) : a network infrastructure that spans a wide geographical area.
- Wireless

Internet: is a worldwide collection of interconnected LANs and WANs.

The internet : the world

Extranet: suppliers, customers, collaborators

Intranet: Company only. The intranet is a private collection of LANs and WANs it will

be accessed only from the organization members.
